[XTRF Vendor Portal] Implement fallback logic for setting deliverable categories

# [XTRF Vendor Portal] Implement fallback logic for setting deliverable categories

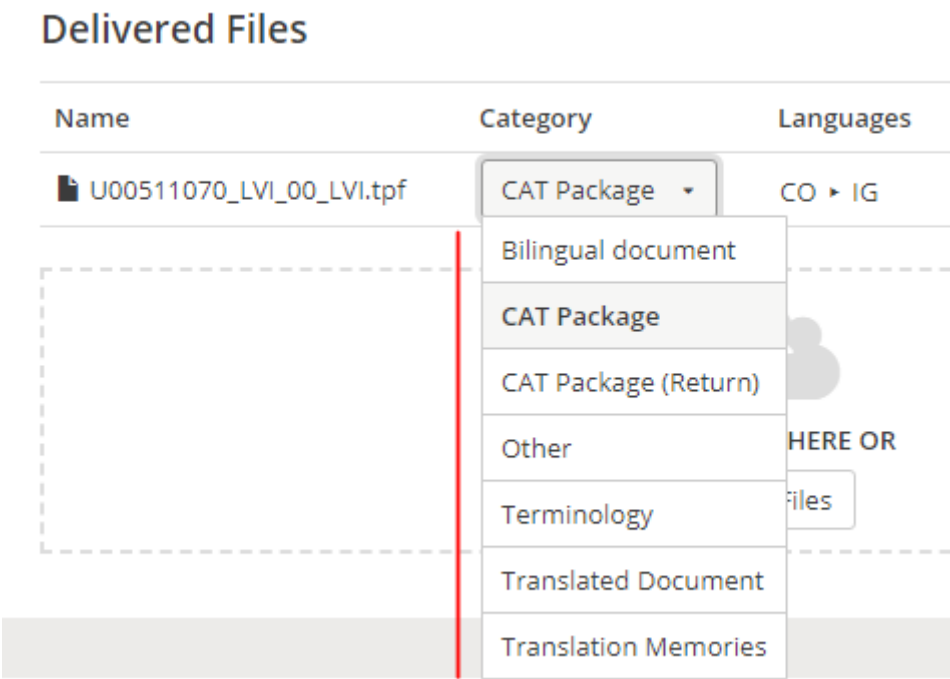

## Introduction

The `deliverable` files in *BeLazy* have a `fileType` property. This is either determined by the **destination** connector when downloading the `deliverable` , or specified by the user when using *REST Api*.

When **delivering** a *smart job* in *XTRF Vendor Portal*, we need to select a **category** for each uploaded `deliverable` . In order to determine the correct **category**, we have a static (non-configurable) mapping in place.

Delivered Files					
Name	Category	Languages	Last Modified	Size	
 U00511070_LVI_00_LVI.tpf	CAT Package	CO ► IG	2021-03-24 13:56 CET	87 KB	

## Issue

The issue with the current solution — as seen in [#2088 \(closed\)](#) — is that not all users have the same set of available **categories** to choose from in the *XTRF Vendor Portal*.

For example, in the concrete case the user does not have `CAT_PACKAGE` as an option, only `CAT_PACKAGE_RETURN` . This prevents *BeLazy* to deliver the project using the current configuration.

## Proposed solution

The solution proposed by [@lengyelistaan](#) is to use fallback values for these **categories**. For example, if *XTRF Vendor Portal* refuses to set `CAP_PACKAGE` as file category, let us try again with `CAT_PACKAGE_RETURN` , then finally with `OTHER` .

This approach lets *BeLazy* use the correct **categories** if they are available, but does not prevent delivery if they are not.

The proposed fallbacks are the following:

Or Closed [XTRF Vendor Portal] Implement fallback logic for setting deliverable categories

Other	OTHER		
BilingualDocument	BILINGUAL_DOC	OTHER	
CatAnalysis	OTHER		
CatPackage	CAT_PACKAGE	CAT_PACKAGE_RETURN	OTHER
Instructions	OTHER		
Package	OTHER		
QAReport	OTHER		
Reference	OTHER		
Source	OTHER		
SourceToBePrepared	OTHER		
Terminology	TERMINOLOGY	OTHER	
TM	TM	OTHER	
TranslatedDocument	TRANSLATED_DOCUMENT	OTHER	

## Tasks

The tasks in this issue are:

- ☐ Finalize the above fallbacks (verify with [@lengyelistvaan](#))
- ☐ Implement the fallback logic in the *XTRF* **origin** connector

This issue was requested by [@lengyelistvaan](#) in [#2088 \(closed\)](#). The implementation should be released as a **hotfix**, if possible.

Reporter

[@vilmos.martinek](#) The fallback logic is looking good generally, but let's make it easy to change this later in the code, as there is no guarantee everyone are using these categories correctly.
