

A close-up photograph of two people working together at a desk. On the left, a man with a beard and glasses, wearing a denim shirt, is focused on his work. On the right, a person in a blue shirt is pointing at a document. They are surrounded by papers and office supplies, suggesting a collaborative workspace.

**Effortless and organized
360-degrees project management
through XTRF's integration with BeLazy**

BeLazy seamlessly connects your XTRF to your customers' systems, enabling you to automate project acceptance, project creation in XTRF and full project automation – also referred to as lights-out project management. You can use XTRF's sophisticated end-to-end automation capabilities and CAT tool integrations and BeLazy's job receipt and job delivery capabilities in conjunction to take your project management to the next level.

.....

BeLazy enables:

- the integration of two XTRF systems
- receiving projects from Plunet portals and automatically creating and managing them in your XTRF,
- automatic management of projects coming from vendor portals of companies such as Lionbridge, Welocalize, RWS Moravia or Translated
- automatic project management in XTRF for projects coming in Memsource, GlobalLink or other translation management systems.

XTRF enables:

- Fully automatic project management, from the moment of project creation until project delivery
-

USER GROUP	PROJECT CREATION	FULL PROJECT AUTOMATION
SINGLE LANGUAGE VENDORS	Use the system to receive jobs from vendor portals of large translation companies in their XTRF system	Use the system to fully automate project receipt, assign the right vendors in XTRF, and deliver the project when ready, for small, continuous localization projects
MULTILINGUAL VENDORS	Use the system to register projects coming from their customers' translation management systems	Use the system to fully automate project management for small projects automatically generated in the client's TMS (CMS integration, continuous software localization, etc.)

Benefits

The integration ensures XTRF and BeLazy deliver fully automated process in your organization.

1- Aggregated project feed

A BeLazy connection is connecting one customer system to your copy of XTRF. One connection is, for example, one customer's XTRF system, the own portals of Moravia or Lionbridge, or your Memsource cloud instance where all customers give you projects. All the projects you receive here, which were previously scattered in many automated emails, are displayed on one single interface and can be approved with one click.

.....

2- Auto-approval

If you want to provide your customers' project managers quick placement times, create auto-approval rules. Projects that meet your rules are automatically accepted in the customers' systems and created in XTRF. Using this approach, you can take more projects in systems that offer the same projects to multiple vendors.

.....

3- Better overview

You don't have to use many systems anymore: BeLazy allows you to see the incoming projects in a simple single interface, and XTRF allows you to manage all the approved projects from beginning to end.

.....

4- Customizability

If you have a regular workflow that you want to automate, even if it's more complicated, BeLazy and the XTRF customization team can work together to provide you with full automation. We also represent your automation agenda towards the MLVs and the TMS providers.

How to try the system?

- 1** Get in touch with the BeLazy team for more information and a 30-minute consultancy call.
 - 2** If you don't have the XTRF APIs, get in touch with the XTRF team to ask for a 30-day trial.
 - 3** Set up another call with the BeLazy team who will help you configure and start using the automation. You get a 15-day trial.
 - 4** If you are happy with the results, you can continue using the automation and be charged for the actual project flow.
-
